I/We, the designer(s), RECOMMEND that this installation is further inspected and tested after an interval of not more than

<sup>\*\*</sup> The proposed date for the next inspection should take into consideration the frequency and quality of maintenance that the installation can reasonably be expected to receive during its intended life, and the period should be agreed between the designer, installer and other relevant parties.

<sup>†</sup> Where the Installer responsible for the construction of the electrical installation has also been responsible for the design and the inspection and testing of that installation, the 'Particulars of the Organisation(s) responsible for the Electrical Installation' may be recorded only in the section entitled 'CONSTRUCTION'

SC	HEDULE OF ITEMS INSPECTED		† See note below
8.5	Non-sheathed cables protected by enclosure in conduit,	1	9.2 Switching off for mechanical maintenance
	ducting or trunking	~	a) Presence of appropriate devices
8.6	Suitability of containment systems (including flexible conduit)	V	b) Acceptable location (state if local or remote) Remote
8.7	Correct temperature rating of cable insulation	/	c) Capable of being secured in the OFF position
8.8	Adequacy of cables for current-carrying capacity with regard to the type and nature of installation	/	d) Correct operation verified (functional check)
8.9	Adequacy of protective devices: type and rated current for fault protection	1	e) The circuit or part thereof to be disconnected clearly identified by location and/or durable marking
8 10	Presence and adequacy of circuit protective conductors	~	9.3 Emergency switching/stopping
	Coordination between conductors and overload protective		a) Presence of appropriate devices
0.11	devices	/	b) Readily accessible for operation where danger might occur
8.12	Wiring systems and cable installation methods / practices	-	c) Correct operation verified (functional check)
	appropriate to the type and nature of installation and external influences		d) The installation, circuit or part thereof to be disconnected, clearly identified by location and/or durable marking
8.13	Cables installed under floors, above ceilings, in walls /		9.4 Functional switching
	partitions, adequately protected against damage	_	a) Presence of appropriate devices
	a) Installed in prescribed zones     b) Incorporating earthed armour or sheath,		b) Correct operation verified (functional check)
	or installed within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like	V	10.0 CURRENT-USING EQUIPMENT (PERMANENTLY CONNECTED)
8 14	Provision of additional protection by RCDs having rated		10.1 Suitability of equipment in terms of IP and fire ratings
0.14	residual operating current ( $I_{\Delta n}$ ) not exceeding 30 mA  a) For mobile equipment with a current rating not exceeding		10.2 Enclosure not damaged/deteriorated during installation so as to impair safety
	32 A for use outdoors	~	10.3 Suitability for the environment and external influences
	b) For all socket-outlets of rating 20 A or less, unless exempt	~	10.4 Security of fixing
	c) For cables installed in walls/partitions at a depth of less than 50 mm	V	10.5 Cable entry holes in ceilings above luminaires, sized or sealed so as to restrict the spread of fire
	d) For cables installed in walls/partitions containing metal	-	10.6 Recessed luminaires (downlighters)
	parts regardless of depth	V	a) Correct type of lamps fitted
8.15	Provision of fire barriers, sealing arrangements so as to	1	b) Installed to minimise build-up of heat
0.10	minimize the spread of fire	-	10.7 Provision of undervoltage protection, where specified
	Band II cables segregated/separated from Band I cables	-	10.8 Provision of overload protection, where specified
8.17	Cables segregated/separated from non-electrical services		10.9 Adequacy of working space/accessibility to equipment
8.18	Termination of cables at enclosures	/	
	a) Connections under no undue strain		11.0 SPECIAL INSTALLATIONS OR LOCATIONS
	b) No basic insulation of a conductor visible outside enclosure	/	List below any Special Installations or Locations which are part of the installation to be verified, and confirm that the additional requirements
	c) Connections of live conductors adequately enclosed		given in the respective section of Part 7 are fulfilled.
	d) Adequately connected at point of entry to enclosure (glands, bushes etc.)	V	
	Suitability of circuit accessories for external influences	~	
8.20	Circuit accessories not damaged during erection	-	
8.21	Single-pole devices for switching in line conductor only		
8.22	Adequacy of connections, including cpcs, within accessories and at fixed and stationary equipment		
9.0	ISOLATION AND SWITCHING		
9.1	Isolators		12.0 OTHER
3.1	a) Presence and location of appropriate devices	~	
	b) Capable of being secured in the OFF position	1	
	c) Correct operation verified (functional check)	V	
	d) The installation, circuit or part thereof that will be isolated is clearly identified by location and/or durable marking	/	
	Warning label posted in situations where live parts cannot be isolated by the operation of a single device	NIA	

SCHEDULE OF ADDITIONAL RECORDS\* (See attached schedule)

Note: Additional page(s) must be identified by the Electrical Installation Certificate serial number and page number(s).

† All boxes must be completed. \$\sqrt{}\$' indicates that an inspection was carried out and that the result was satisfactory. 'N/A' indicates that an inspection was not applicable to the particular installation.
